Safety Standart

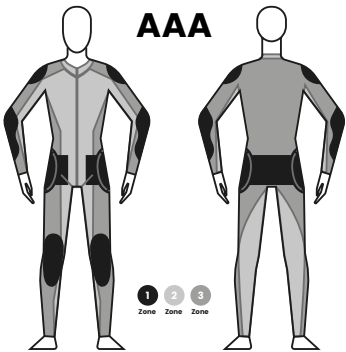

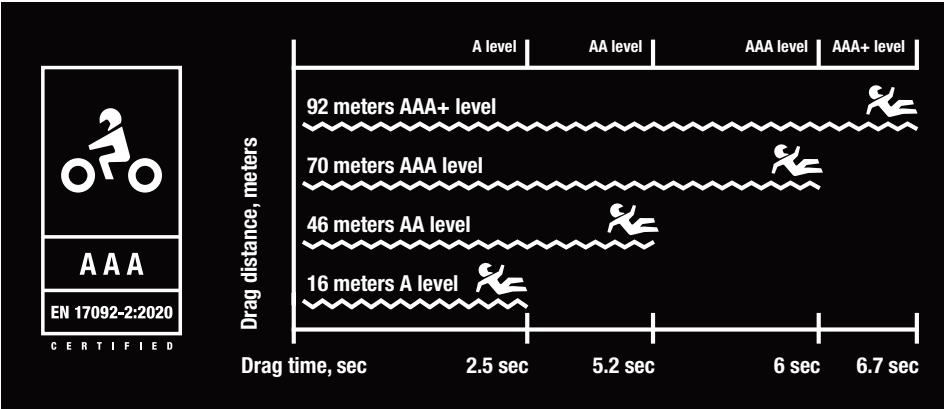

CE Safety Standards for Motorcycle Apparel

Motorcycle apparel certified under the EN 17092 safety standard is divided into four protection classes: AAA, AA, A, and B. These classes define the level of protection a garment provides, particularly against impact and abrasion.

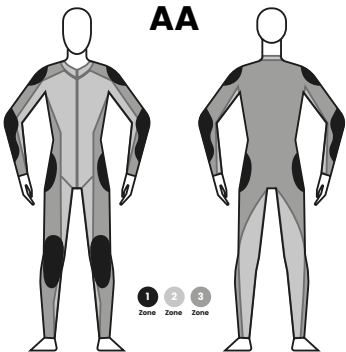

Class AAA represents the highest level of safety, while Class B offers the most basic level. PANDO MOTO gear is fully CE-tested and approved, achieving some of the highest performance ratings in the industry.

PANDO MOTO gear is fully CE-tested and approved, achieving some of the highest performance ratings in the industry.

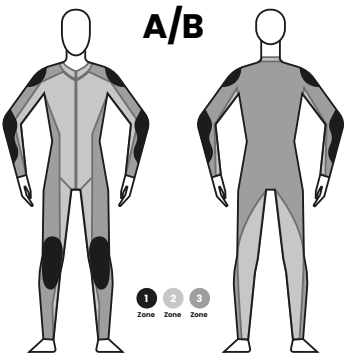

This chart was created using data from Darmstadt abrasion tests, a method used in CE certification to simulate real-world crash scenarios. After testing, we request detailed results like how fast the material was spinning, how far it slid, and how long it resisted wear. It's our way of turning technical lab results into something riders can actually relate to.

Class AAA Garments (EN 17092-2:2020) provide the highest level of protection against impact and abrasion, utilizing advanced materials and construction techniques that surpass the standards of Class AA and A gear. These garments are designed to offer maximum safety in demanding riding conditions and are often found in high-performance one-piece suits or premium combi suits.

Class AA Garments (EN 17092-3:2020) provide a strong balance between protection and comfort. They are built to handle a wider range of riding activities while meeting higher protective standards than Class A gear. While not as robust as Class AAA garments, they are more ergonomic and less restrictive, making them ideal for touring or everyday riding.

Class A & B Garments (EN 17092-4:2020 & EN 17092-5:2020)

Class A garments provide the minimum certified level of protection against impact and abrasion, utilizing lighter materials and construction that are ideal for warmer climates or casual urban riding. These garments emphasize comfort and flexibility and are typically designed to be worn on their own or over regular clothing.

Class B garments offer comparable abrasion resistance to Class A but lack built-in impact protection. These garments are intended to be worn with separate CE-certified protectors (e.g., EN 1621-1 armor for shoulders, elbows, or knees). Class B gear should not be worn alone if impact protection is needed.

Technology

Tested Tough: Real-World Protection, Lab-Proven Performance

At PANDO MOTO, protecting riders isn't just a promise — it's a process. That's why every piece of gear we create is tested to the highest standards, both in the lab and on the road. We partner with CTC (Certified Testing Center), one of Europe's leading CE accredited motorcycle safety testing laboratories, to make sure our products deliver when it matters most. But we don't just rely on paperwork. We go hands-on. Our team visited CTC in person to witness each step of the testing process — watching our gear get pushed to the limit, documenting the results, and gaining insights that help us build better, safer gear. Here's what that process looks like:

Key Safety Tests Our Gear Undergoes

Abrasion Resistance

We simulate high-speed slides to ensure our fabrics stand up to serious abrasion, giving you critical seconds of protection during a fall.

Seam Strength & Durability

Strong materials mean nothing if seams give out. We test every stitch to make sure your gear holds together under crash-level stress.

Tear strength test

From snagging on sharp edges to sliding across debris, our materials are tested to resist rips and punctures — keeping you protected in unpredictable situations.

Impact Protection

Our glove armor is tested for shock absorption, ensuring it cushions your body and reduces injury in the event of impact — all while staying flexible and comfortable on the bike.

Footwear Testing

Our sneakers went through rigorous impact, sole grip, and pressure resistance tests — protecting your feet from crush injuries.

The Darmstadt Test: Gold Standard for Motorcycle Gear

We go beyond minimum requirements. Many of our products are tested using the Darmstadt Method, the most realistic and demanding test available today. This advanced testing process delivers:

Real-world crash simulations (including sliding and impact)

Clear safety ratings (AAA, AA, A) for easy gear comparison

A drive toward next-gen materials like Balistex®, Kevlar®, and Cordura®

Verified protection from road rash and serious injury

CTC

Shared Values with CTC: Why It Matters

Our partnership with CTC
is rooted in shared values:

Expertise: Advanced safety knowledge and foresight help us create gear that's ready for the future of riding.

Transparency: We learn directly from the lab and bring those insights straight to you.

Commitment: Every test, every stitch, every detail is double-checked — because safety is our top priority.

Inclusivity: Gear for every rider.

Integrity: Ethical, sustainable, and responsible — we don't just meet the standard; we aim to raise it.

Built for the Ride. Proven in the Lab. Trusted by Riders.

What we saw at CTC wasn't just about numbers — it was about purpose. Every result confirmed that our gear isn't just built to look good; it's built to save lives. And that's the PANDO MOTO commitment. When you're out there chasing the horizon, we've got your back — tested, trusted, and ready for anything.

CEO and FOUNDER
of PANDO MOTO
Marius Bieliauskas

BALISTEX[®]

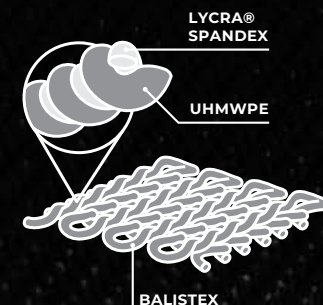

Extra stretchy
Cooling
Military proven strength

SINGLE LAYER

BALISTEX

This fabric is a combination of new generation Ultra-High Molecular Weight Polyethylene (UHMWPE) and spandex, where both yarns are woven together providing the fabric extra elasticity and strength. It has unique abrasion and cut resisting features and is lighter than regular UHMWPE. Primarily used in military and law enforcement equipment, this technology became available for motorcycle and bicycle apparel applications and is now also employed by PANDO MOTO for the production of our base-layer products.

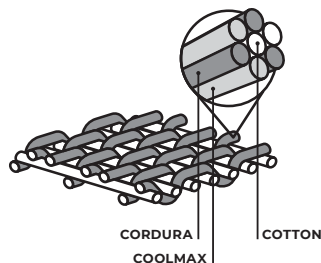

Technology

SINGLE LAYER

CORDURA

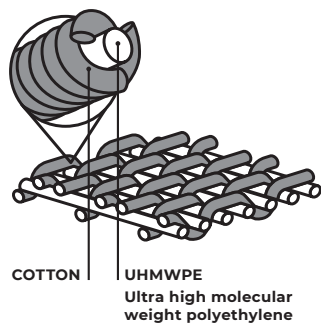

Designed to help hard-working jeans last longer than traditional cotton denim. CORDURA® DENIM is engineered with an intimate blend of military-grade INVISTA T420 nylon 6,6 staple fiber and cotton for an authentic denim look and feel with enhanced abrasion resistance and toughness.

SINGLE LAYER

ARMALITH

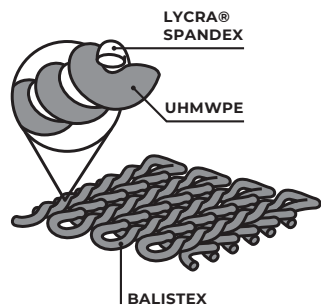

ARMALITH® is made by assembling cotton fiber with UHMWPE fiber, until now only used in space, military and offshore applications. This exclusive technology produces genuine denim with a core framework that gives it the mechanical qualities of leather. ARMALITH® is resistant to abrasion, snagging and tearing, and provides exceptional comfort at all seasons.

SINGLE LAYER

BALISTEX

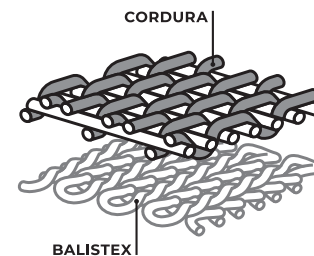

This fabric is a combination of new generation Ultra-High Molecular Weight Polyethylene (UHMWPE) and spandex, where both yarns are woven together providing the fabric extra elasticity and strength. It has unique abrasion and cut resisting features and is lighter than regular UHMWPE. Primarily used in military and law enforcement equipment, this technology became available for motorcycle and bicycle apparel applications and is now also employed by PANDO MOTO for the production of our base-layer products.

DOUBLE LAYER

CORDURA + BALISTEX

The best combination for ultimate protection. A layer of super strong yet very elastic BALISTEX together with the layer of CORDURA® DENIM scores AAA+ protection level making the product as safe as high-tech race-suit for urban riding. Additionally, BALISTEX with its known cooling features provides extra points to this mix.

COLLABORATIONS

ROYAL ENFIELD

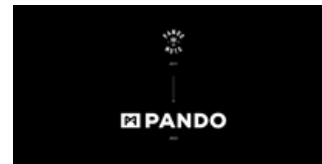

It was the beginning of something special. 32 sq.m. office just above the Harley Davidson shop. Something we are proud to remember and share. Along with that, the collaboration with the Harley Davidson Baltic kicked off and never ended.

With our new collection we took our first steps in Asian markets: China, Japan, Thailand, and South Korea.

Opened new distribution and logistics center, a key step in the company's expansion. Facility serves as a hub for efficiently distributing motorcycle gear and apparel to retailers and customers worldwide.

PANDO MOTO continues to grow — we've moved to new offices and expanded our team to support rising demand. With over 30,000 riders buying and wearing PANDO gear annually, and a proud collaboration with Royal Enfield, we're riding forward stronger than ever.

2025

It all started with our founder's grandfather — a hard-headed motorcycle enthusiast who, back in the days when motorcycles were hard-acquired commodities, was already grinding the streets with his good old B.S.A B30.

The first steps towards gaining worldwide brand awareness. 2014 EICMA show in Milan was a springboard towards international expansion. Sleepless nights, tons of coffee, and joy for success!

PANDO MOTO rebirth. New logo, new looks, new beginnings.

PANDO MOTO achieved a strong 20% increase in its business-to-business (B2B) operations. This growth shows clear improvement compared to earlier periods and highlights the success of the company's recent strategies and operational improvements.
